SUMMARY

Computer Science Engineering student with hands-on experience building secure, RESTful web applications using Spring Boot, Spring Security, and React.js. Skilled in designing scalable, layered back-end architectures, implementing JWT-based authentication, and integrating relational (MySQL) and NoSQL (MongoDB) databases.

EDUCATION

Lakshmi Narain College of Technology, Bhopal 2023 – 2027
B.Tech in Computer Science Engineering | CGPA: 8.14 / 10.0

The Iconic School, Bhopal 2023
CBSE Class XII | Percentage: 87.2%

Mithi Gobindram Public School, Bhopal 2021
CBSE Class X | Percentage: 98%

TECHNICAL SKILLS

Languages	Java, JavaScript
Frontend	HTML5, CSS3, React.js
Backend	Spring Boot, Spring MVC, Spring Security, RESTful APIs, Hibernate (JPA), JDBC, JWT Authentication
Gen AI Basics	LLMs, Prompt Engineering, RAG, Embeddings, Vector Databases, LLM APIs, Spring AI
Databases	MySQL, MongoDB Atlas
Core CS	Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks
Tools	GitHub, Postman, VS Code, IntelliJ IDEA

PROJECTS

Online Food Delivery Website GitHub
Tech Stack: Java, Spring Boot, Spring Security, JWT, Spring Data JPA, Hibernate, MySQL, React.js

- Developed a full-stack online food delivery website using React.js and Spring Boot, allowing users to browse restaurants, explore menus, add items to cart, and place orders.
- Implemented secure user authentication and role-based authorization using Spring Security and JWT for customers, restaurant owners, and delivery partners.
- Built RESTful APIs for restaurant, menu, cart, order, and user management, following a layered Controller-Service-Repository architecture.
- Designed relational database models using MySQL, JPA, and Hibernate to efficiently manage users, restaurants, menu items, orders, and order details.
- Added order tracking, search and filtering, input validation, pagination, and centralized exception handling to provide a reliable and user-friendly web experience.

AI Task Alarm — Write to Silence GitHub
Tech Stack: Java, Spring Boot, MongoDB, React.js, Google Gemini API

- Developed a full-stack web alarm application that requires users to write a coherent 30–50 word daily task, validated by an AI (Google Gemini API), before the alarm can be dismissed.
- Implemented JWT-based authentication, MongoDB-backed alarm/task storage, and UTC-to-IST time conversion for accurate scheduling using Spring Boot and React.
- Integrated a third-party LLM API for automated task validation, real-time alarm polling, and a responsive React interface with Spring Security for user-scoped data access.

CERTIFICATIONS

- ServiceNow Certified System Administrator (CSA) — ServiceNow | May 8, 2026
- ServiceNow Certified Application Developer (CAD) — ServiceNow | Jun 23, 2026
- Data Structures and Algorithms with Java — NPTEL
- Associate in IT Foundation Skills (Java) — IT Foundation
- Database and SQL — Infosys
